The International Critical Care Symposium (ICCS) will be organized in Chennai, India on 29 & 30 October, 2010. The Symposium will be held at The Radisson Temple Bay, Mamallapuram, Chennai - near an acclaimed world heritage site with stylish rooms, cottages and villas, banquet and conference facilities as well as specialty restaurants to make your stay more memorable.

Intensive care medicine is a branch of medicine concerned with the provision of life support or organ support systems in patients who are critically ill and require intensive monitoring. Critical care is a relatively new but increasingly important medical specialty. Physicians who have training in critical care medicine are referred to as Intensivists. The International Critical Care Symposium will offer you an active program of the latest significant developments in critical care practice and research. The program is specially designed to meet the expected needs in facing the challenges in managing critical care in daily clinical settings.

This symposium brings together for the first time several world renowned speakers to India and a wide range of delegates associated with critical care.

Prof Donald B. Chalfin, MD, MS, FCCM is currently the Medical Director of Health Economics and Outcomes Research (HEOR) at Abbott Diagnostics, responsible for implementing the health economics research program for three of the company's diagnostic business. Dr. Chalfin is board certified in three medical disciplines: critical care medicine, internal medicine, and hospice and palliative medicine. He is an active clinical researcher, is widely published in the peer-review literature with over 80 peer-reviewed articles, abstracts, and book chapters, and remains an actively sought lecturer at many international medical and scientific meetings. He has consulted with many organizations, research groups, and firms on issues related to health economics, outcomes research, clinical practice, research design, organizational strategy, and continuous quality improvement.

Prof Mervyn Singer is an international jet setter, man of mystery, bon vivant, modern-day Hercules and role model for Austin Powers wannabees all rolled into one. His mundane cover identity is an intensivist at University College London, UK where no-one remotely suspects his alternate existence. He pits his sleuthing skills, superhuman energy and licence-to-kill in the battles against sepsis and multi-organ failure, shock, inadequate monitoring, dogma and bad practice.
